

# fentanyl. fentanyl. fentanyl.

changes everything.

**FACING  
FENTANYL**

## THERE IS NO SAFE DOSE OF FENTANYL

It's highly addictive and just **2mg** is enough to kill.

Most fake pills now contain fentanyl.

Illicit fentanyl is a man-made synthetic opioid.

50x stronger than heroin. 100x more potent than morphine.

Fentanyl poisoning is the #1 cause of death in Americans ages 18–45.

### THE TRUTH

Illicit fentanyl is found in all street drugs including heroin, cocaine, and meth.

Illicit fentanyl is found in fake pills that look like prescription medications such as Percocet, Adderall, and Xanax.

Illicit fentanyl is odorless and tasteless. You won't know it's hiding in the drugs you choose to use or try.

You cannot see, taste, or smell fentanyl. You may be putting your life at risk without knowing it.

#### WHY THIS MATTERS:

You may not know what you're taking. Even one pill can be deadly.

### SIGNS OF OPIOID OVERDOSE

Slow, shallow, or stopped breathing

Blue or gray lips or skin

Won't wake up or respond

Gurgling, choking, or rasping sounds

Very small pupils

### ACT FAST

**CALL 911  
IMMEDIATELY**

**GIVE NALOXONE  
IF AVAILABLE**

**STAY UNTIL  
HELP ARRIVES**

**EVERY SECOND  
COUNTS.**

## CARRY NALOXONE

Naloxone can reverse an opioid overdose.

Safe to use

Works in minutes

May require more than one dose

Naloxone is available without a prescription at most pharmacies. Ask your pharmacist.
