

# KNOW THE NEW RISK

## CYCLOPHINE

A NEW AND DANGEROUS  
EMERGING DRUG

Cyclophine is a powerful synthetic opioid that is showing up in pills, powders, and counterfeit drugs.

It can be **deadly** even in very small amounts.

You can't see it, taste it, or smell it—but it can stop your breathing.

**One pill. One choice. It only takes one.**

**FACING  
FENTANYL**

### WHAT IS CYCLOPHINE?

Cyclophine is a synthetic opioid, similar to fentanyl, but even more potent.

It has been found in counterfeit pills, powders, and mixed into other drugs without warning.

### WHY IT'S DANGEROUS

- Extremely potent—active in tiny amounts
- High risk of overdose
- Often mixed without your knowledge
- No test strips can reliably detect it yet

### KNOW THE SIGNS OF OVERDOSE

- Small, slow, or no breathing
- Cold or clammy skin
- Blue or gray lips or nails
- Unresponsiveness
- Pinpoint pupils

**CALL 911 IMMEDIATELY.  
NALOXONE CAN SAVE A LIFE.**

## WAYS TO PROTECT YOURSELF AND YOUR FRIENDS

### DON'T USE ALONE

Having someone with you could save your life. If you can't have someone with you, use a drug checking service if available.

### CARRY NALOXONE

It can reverse an overdose from opioids like cyclophine. They're free and easy to use.

### START LOW, GO SLOW

If you do use, start with a very small amount. What you're using may be stronger than you think.

### ASK QUESTIONS, SAVE LIVES

Don't be afraid to talk to trusted friends or harm reduction workers. There are no dumb questions.

### STAY INFORMED, STAY CONNECTED

Things change fast. Stay up to date and check in with your community.

### KEY MESSAGE

**LOOK OUT FOR EACH OTHER.**

**START THE CONVERSATION. STAY CONNECTED.**
